COMPONENTS IN THE TABLE ROWS
OF MONETARY AND NON-MONETARY AVERAGE
FAMILY EXPENSES

Initial Observations:

- This document presents the product codes for the components of each row in the monetary and non-monetary average family expenses table.

- Each code with 5 digits was composed from 2 digits of the variables "chart number" and the 3 first digits of the variable "item code".

- The 2 last digits of the variable "Item Code" refer to sequential numbers, used to identify synonyms or different regional denominations of a same product. Since these sequentials are aggregated into one single code in the table's construction, they needn't be described in the table's rows.
